

South Hero Wastewater Feasibility

...Winter 2024 updates...

In December, test pits were dug at 4 properties to identify suitable soil for wastewater treatment. The newly released draft report (60% complete) identifies a potential wastewater system option based on the results.

JOIN US FOR A COMMUNITY PRESENTATION AND DISCUSSION ON THE STUDY'S PROGRESS SO FAR **FEBRUARY 27, 2024 ~ 6:00PM ~ WORTHEN LIBRARY**

In-person meeting, Zoom option available (see website for details)

WHAT DOES THE 60% REPORT TELL US?

The feasibility study assesses community wastewater disposal options for South Hero's village areas. It has considered the suitability of nearby properties for on-site soil-based treatment, the need for additional secondary or tertiary treatment, and a preliminary plan for distribution and connection. The 60% report identifies all potential alternatives that have been identified thus far. The next step is to update the selection board on the report, present at a community meeting and develop the 99% complete report, which will include more refined cost estimates and funding strategies.
